FandolKai (FandolKai-Regular.otf v0.3 2015-07-18)

This Serif font covers English, Russian, Simplified Chinese and Yi. The Greek letters do not include accented letters. It does not support Korean Hanjul and has incomplete support for Japanese and Traditional Chinese (specifically, insufficient to show my Article 1 examples).

Kai is a ' regular' or ' official' style, typically used for official documents.

This has a few accented Latin letters needed to show the tones in Pinyin (汉语拼音方案 in Simplified).

For variations of the Cyrillic alphabets I attempt to show the whole alphabet, followed by Article 1 of the UDHR (it is traditional!). For other scripts and languages I merely display the digits (if not common 0..9) and Article 1.

This document was prepared using X⅂LATEX and fontspec. In this font, missing glyphs are usually shown by an F in a box (F). Depending on line-spacing, the trademark symbol ( ) which is very tiny and positioned very high may appear to be a blank space.

This font has only Regular weight and lacks an italic style.

It lacks the OpenType tags ' hani' , ' cyrl' needed to use polyglossia for CJK or Cyrillic scripts.

3 Other Asian scripts

4 Quotation-marks, etc.

In real-world usage, particularly when looking at news sites, the presence or absence of the correct quote characters will make a difference. As a coder, I use ' ...' or " ..." but in good text there are variations and this font supports:

left and right single quotes	'...'	angle brackets	〈...〉
left and right double quotes	"..."	double angle brackets	《...》
single turned comma,		corner brackets	「...」
with right single quote	'...'	white corner brackets	『...』
angle quotes <...>
