

This serif font covers some West European languages, Russian and Serbo-Croat in the Cyrillic alphabet, and Korean.

For variations of the Latin and Cyrillic alphabets and for monotonic Greek I attempt to show the whole alphabet, followed by Article 1 of the UDHR (it is traditional!). For other scripts and languages I merely display the digits (if not common 0..9) and Article 1.

CJK languages use an ellipsis codepoint to show omissions or tailing-off in speech. The codepoint is ideally placed at mid-level (most old CJK fonts do that if they do not cover non-English Latin languages), but in Unicode 14 the mid-level ellipsis (a mathematical symbol) was recommended for this purpose. Before that, Japanese fonts tended to ignore that mathematical symbol because it was not in the JIS tables of glyphs. This font uses mid-level ellipses.

This document was prepared using Lua^LTeX and fontspec.
 Missing glyphs will be replaced by an empty box.

It has regular and bold weights in a normal face.

If you need to show Korean Hanja, this font omits 3512 of the permitted 8095 forename glyphs in the Naver dictionary, and 33 of the 500 Hanja used for surnames in the 2015 census.

This font lacks the OpenType tags 'cyr', 'grek' needed to use polyglossia for Cyrillic or Greek scripts.

5 Quotation-marks, etc.

In real-world usage, particularly when looking at news sites, the presence or absence of the correct quote characters will make a difference. As a coder, I use '...' or "..." but in good text there are variations and this font supports:

left and right single quotes ‘...’
 left and right double quotes “...”
 single turned comma, right single quote ‘...’
 guillemets «...»
 angle quotes <...>
 angle brackets <...>
 double angle brackets 《...》
 corner brackets 「...」
 white corner brackets 『...』

In Spanish languages, the inverted exclamation-mark ¡ and inverted question-mark ¿ are necessary.
