UnDotum (UnDotum.ttf from unfonts-core-1.0.2-080608)

This Korean font covers languages written with a latin-1 alphabet (although it lacks uppercase Y with diaeresis which might be found in French) as well as Russian and Serbo-Croat (but it lacks the accented ie and i used in Macedonian) as well as monotonic Greek, Korean, and Traditional Chinese (Mandarin, not Cantonese). For variations of the latin, cyrillic, and greek alphabets I attempt to show the whole alphabet, followed by Article 1 of the UDHR (it is traditional!). For the other scripts and languages I merely display the digits (if not common 0..9) and Article 1.

5 Quotation-marks, etc.

In real-world usage, particularly when looking at news sites, the presence or absence of the correct quote characters will make a difference. As a coder, I use '...' or "..." but in good text there are variations and this font supports:

left and right single quotes '...'
left and right double quotes "..."
single turned comma, right single quote '...'
guillemets «...» and angle quotes <...>

and for traditional chinese and japanese
corner brackets 「...」and
white corner brackets『...』

In Spanish languages, the inverted exclamation-mark ¡ and inverted question-mark ¿ are necessary.
